Backreference constructs allow a previously matched sub-expression to be identified subsequently in the same regular expression.

The following table lists these constructs –

Backreference construct	Description	Pattern	Matches
\ number	Backreference. Matches the value of a numbered subexpression.	\w ₁	"ee" in "seek"
\k< name >	Named backreference. Matches the value of a named expression.	? < char > \w \k< char>	"ee" in "seek"
